## 1 INTRODUCTION

### 1.1 Document Scope

This document will explain the procedures for Data Ingest for WSDC operations. Incoming MOS (Mission Operations System) data from Jet Propulsion Laboratory and science telemetry data from White Sands tracking station come into the wsdcin machine at IPAC.

MOS ancillary data such as sequence products (time kernals, ground track, pef files), pointing data, housekeeping etc. will be delivered to the wsdcin:/local/wsdcin/inbox/mos directory. The White Sands HRP (High Rate Processor) telemetry data will be delivered to wsdcin:/local/wsdcin/inbox/hrp. The MOS deliveries will be ongoing daily whereas we expect to receive four telemetry downlinks per day on average 25 gigabytes.

The Data Ingest procedures can be broken up into three broad categories. There is a process running continuously on the wsdcin machine that looks for incoming data, validates it and creates a delivery manifest. There is a process continuously running on wcnod35 that looks for newly created delivery manifests and copies the data into the ingest-expected format on the WSDC operations system. Lastly, the ingestpipe decommutes the science packets into individual frames grouped by scans (approximately one half orbit). Ingestpipe also copies the MOS data to the correct locations and loads the housekeeping data into the HK database.

[http://wise.ipac.caltech.edu/wiki/index.php/Qlook\\_summary\\_command](http://wise.ipac.caltech.edu/wiki/index.php/Qlook_summary_command)

### 1.3 Acronyms

HRP - High Rate Processor  
IPAC - Infrared Processing and Analysis Center, California Institute of Technology  
MOS - Mission Operations System  
WSDC - WISE Science Data Center (IPAC)  
WSDS - WISE Science Data System  
YYYY\_JJJ\_HH\_MM\_SS - Year Julian day of year\_hours\_minutes\_seconds

## 2 raw\_copy Procedure

### 2.1 raw\_copy Command

The raw\_copy command runs continuously on machine wsdcin checking the /local/wsdcin/inbox mos and hrp directories for new deliveries. The data are actually written to the /local/wsdcin/inbox/tmp subdirectory until the file has been completely transferred. Once the data is complete, the file is moved to the appropriate mos or hrp subdirectory. The subdirectory takes the form YYYY\_JJJ\_HH\_MM\_SS.

## 2.2 Raw Data Locations

Here is the incoming directory on wsdcin.

```
-bash-3.2$ ls -al /local/wsdcin/inbox
drwxr-xr-x 53 wsdcin wise 4096 Jul 31 14:16 hrp
drwxr-xr-x  2 wsdcin wise 4096 Apr 30 15:00 logs
drwxr-xr-x 32 wsdcin wise 4096 Jul 25 06:37 mos
drwxrwxr-x  4 wsdcin wise 4096 Apr  6 16:13 operations
drwxr-xr-x  2 wsdcin wise 4096 Jul 31 23:41 tmp
drwxr-xr-x  2 wsdcin wise 4096 Jan 16  2009 trash
```

These are the timestamped subdirectories.

```
-bash-3.2$ ls -al /local/wsdcin/inbox/hrp/
drwxrwxrwt  2 wsdcin wise 4096 Jul 31 13:26 2009_212_20_14_03
drwxrwxrwt  2 wsdcin wise 4096 Jul 31 13:39 2009_212_20_27_19
drwxrwxrwt  2 wsdcin wise 4096 Jul 31 23:41 2009_212_20_41_44
```

This is an example of the telemetry packet files, one per band. Note the timestamp on the directory is the same as the files within.

```
-bash-3.2$ ls -al /local/wsdcin/inbox/hrp/2009_212_20_41_44/
-rw xr-xr-- 1 wsdcin wise 2136137640 Jul 31 21:00
WIS_HRP_PKT_FE1A_2009_212_20_41_44_001.bin
-rw xr-xr-- 1 wsdcin wise 1988368200 Jul 31 20:34
WIS_HRP_PKT_FE1B_2009_212_20_41_44_001.bin
-rw xr-xr-- 1 wsdcin wise 2998850400 Jul 31 23:41
WIS_HRP_PKT_FE1C_2009_212_20_41_44_001.bin
-rw xr-xr-- 1 wsdcin wise 647577840 Jul 31 16:22
WIS_HRP_PKT_FE1D_2009_212_20_41_44_001.bin
-rw r---r-- 1 wsdcin wise      221 Jul 31 14:16 WIS_HRP_SUM_2009_212_20_41_44.txt
```

A sample MOS directory. The \*.bc file is pointing data whereas the \*.zip file is housekeeping.

```
-bash-3.2$ ls -al /local/wsdcin/inbox/mos/2009_206_13_37_10/
-rw r---r-- 1 wsdcin wise    225280 Jul 25 06:37 WISE_CK_2009_07_25_13_30_28.bc
-rw r---r-- 1 wsdcin wise     113 Jul 25 06:37 WIS_MOS_SUM_2009_206_13_37_10.txt
-rw r---r-- 1 wsdcin wise 19968292 Jul 25 06:37 WIS_WTCCS_VALUE_2009_07_25_13_36_03.zip
```

Here is a sample delivery with sequence products.

```
-bash-3.2$ ls -al 2009_263_21_15_05
-rw r---r-- 1 wsdcin wise      312 Sep 20 14:15 WIS_MOS_SUM_2009_263_21_15_05.txt
-rw r---r-- 1 wsdcin wise    295936 Sep 20 14:15
WIS_NAV_SPK_WISEONLY_2009_260_20_38_22.bsp
-rw r---r-- 1 wsdcin wise 15593729 Sep 20 14:15 WIS_NAV_WGT_2009_260_20_38_22.txt
-rw r---r-- 1 wsdcin wise 6233088 Sep 20 14:15 WIS_PGEN_WIS_WSEQ_1003_2A-
PL_2009_251_16_34_29.bc
-rw r---r-- 1 wsdcin wise    20966 Sep 20 14:15
WIS_WSEQ_1003_2A_1003_2A_1003_1A_SURVEY_PLAN_2009_238_20_54_11.txt
-rw r---r-- 1 wsdcin wise   429627 Sep 20 14:15 WIS_WSEQ_1003_2A.cmf
-rw r---r-- 1 wsdcin wise 1433384 Sep 20 14:15 WIS_WSEQ_1003_2A.pef
-bash-3.2$
```

In this delivery, we received a pef file, a predicted pointing file (PGEN), a WISE S/C SP kernal (SPK), a survey plan file (SURVEY\_PLAN) and some other files we do not use for ingest.

## 2.3 Command Usage

Here is the raw\_copy command usage.

```
-bash-3.2$ /home/beck/bin/raw_copy  
command usage: raw_copy SLEEP
```

where SLEEP is number of seconds to sleep

This command will check /local/wsdcin/inbox directories hrp and mos for new data. Once finding the new directories, it will check the summary file for filenames and sizes. Assuming that checks out ok, a file will be created in /local/wsdcin/inbox/operations/[hrp|mos] with the directory name. This file will contain the filenames, sizes and checksums used for checking the copy to /wise/fops.

The raw\_copy process will wake up every SLEEP seconds and check for new deliveries. Once finding a new one, it will check the delivery versus the \*SUM\* file accompanying the delivery. For example, raw\_copy checks the contents of the \*SUM\* file and makes sure the filenames and sizes match.

## 2.4 Example MOS Delivery

```
-bash-3.2$ ls -al /local/wsdcin/inbox/mos/2009_206_13_37_10/  
-rw-r--r-- 1 wsdcin wise 225280 Jul 25 06:37 WISE_CK_2009_07_25_13_30_28.bc  
-rw-r--r-- 1 wsdcin wise 113 Jul 25 06:37 WIS_MOS_SUM_2009_206_13_37_10.txt  
-rw-r--r-- 1 wsdcin wise 19968292 Jul 25 06:37 WIS_WTCCS_VALUE_2009_07_25_13_36_03.zip
```

Here are the \*SUM\* file contents.

```
-bash-3.2$ cat  
/local/wsdcin/inbox/mos/2009_206_13_37_10/WIS_MOS_SUM_2009_206_13_37_10.txt  
#BEGIN_FILE  
WISE_CK_2009_07_25_13_30_28.bc,225280  
WIS_WTCCS_VALUE_2009_07_25_13_36_03.zip,19968292  
#END_FILE
```

In this example you can see that both the filenames and sizes match the \*SUM\* file and what is actually in the directory. When raw\_copy is happy with the delivery, it creates a manifest file in the /local/wsdcin/inbox/operations/mos directory.

## 2.5 Manifest File Creation

```
-bash-3.2$ ls -al /local/wsdcin/inbox/operations/mos/2009_206_13_37_10  
-rw-r--r-- 1 beck wise 158 Jul 25 06:37  
/local/wsdcin/inbox/operations/mos/2009_206_13_37_10
```

Here are the manifest contents.

```
-bash-3.2$ cat /local/wsdcin/inbox/operations/mos/2009_206_13_37_10  
WISE_CK_2009_07_25_13_30_28.bc 225280 4030132031  
WIS_MOS_SUM_2009_206_13_37_10.txt 113 3974201741  
WIS_WTCCS_VALUE_2009_07_25_13_36_03.zip 19968292 2224941162
```

This file contains the same information as in the \*SUM\* file adding the \*SUM\* filename and checksums for all files.

## 2.6 raw\_copy Output Log

The raw\_copy command creates a log file in /local/wsdcin/inbox/operations/raw\_copy.log. Here is sample output.

```
-bash-3.2$ tail -20 /local/wsdcin/inbox/operations/raw_copy.log
Jul 25 21:33:18: checking dir /local/wsdcin/inbox/hrp/2009_195_20_53_09 ...
file WIS_HRP_PKT_FE1A_2009_195_20_53_09_001.bin looks good ...
file WIS_HRP_PKT_FE1B_2009_195_20_53_09_001.bin looks good ...
file WIS_HRP_PKT_FE1C_2009_195_20_53_09_001.bin looks good ...
file WIS_HRP_PKT_FE1D_2009_195_20_53_09_001.bin looks good ...

Jul 31 11:24:30: checking dir /local/wsdcin/inbox/hrp/2009_212_18_17_34 ...

file WIS_HRP_PKT_FE1D_2009_212_18_17_34_001.bin looks good ...
ERROR: raw_check failed with 3 return ...

Jul 31 11:34:30: checking dir /local/wsdcin/inbox/hrp/2009_212_18_17_34 ...
file WIS_HRP_PKT_FE1A_2009_212_18_17_34_001.bin looks good ...
file WIS_HRP_PKT_FE1B_2009_212_18_17_34_001.bin looks good ...
file WIS_HRP_PKT_FE1C_2009_212_18_17_34_001.bin looks good ...
file WIS_HRP_PKT_FE1D_2009_212_18_17_34_001.bin looks good ...
```

The error occurs when the \*SUM\* file does not match the directory. In this case the band 4 telemetry packet was complete while the other bands were still transferring over.

## 3 get\_wsdcin Procedures

### 3.1 get\_wsdcin Command

Command get\_wsdcin runs continuously on wcnode35 and checks the wsdcin:/local/wsdcin/inbox/operations/ directories mos and hrp for new manifests. Once finding a new manifest will copy it to /wise/fops/operations directories mos and hrp and the files contained within the manifest to the /wise/fops/ingest/delivs directory. The data copied over will be checked for filenames, sizes and checksums to ensure the data copies are correct. Directory names are changed from YYYY\_JJJ\_HH\_MM\_SS to ingest-expected YYJJJ/YYJJTTHHMMSS names for telemetry (HRP) deliveries and YYJJJ/YYJJMHHMMSS for MOS deliveries. Once a transfer is successful, an email is sent out to the list of people contained in /wise/fops/operations/ingest.email. An email is also sent out should a transfer fail.

### 3.2 Command Usage

```
beck@caustic;rhe4(ops):~[0]% get_wsdcin
command usage: get_wsdcin SLEEP
```

where SLEEP is number of seconds to sleep

This command will check wsdcin:/local/wsdcin/inbox/operations directories hrp and mos for new files. Once finding the new file, it will copy the new directory from wsdcin:/local/wsdcin/inbox directory hrp or mos to a temporary directory with subdirectories conforming to the ingest convention. The wsdcin:/local/wsdcin/inbox/operations file will also be copied to the same directory on the ingest machine, in this case wcnode35. This file containing filenames, sizes and checksums will then be used to ensure the copy was complete. The last step following checkout is to move the subdirectories from the

temporary directory location to the ingest expected directory.

### 3.3 get\_wsd cin Log File

The get\_wsd cin log file is in /wise/fops/operations/raw del/tranfer\_summary.

```
beck@caustic;rhe4(ops):raw_del[0]% ls -al /wise/fops/operations/raw_del/tranfer_summary
-rw-rwxr-x 1 beck wise 102836 Jul 31 11:35
/wise/fops/operations/raw_del/tranfer_summary
```

Here is a sample of the log file.

```
beck@caustic;rhe4(ops):raw_del[0]% tail !$
tail /wise/fops/operations/raw_del/tranfer_summary
Jul 31 11:15:04: sleeping 600 ...
Jul 31 11:25:05: sleeping 600 ...

Jul 31 11:35:05: found 09212T181734 to transfer ...
mkdir -p /wise/fops/ingest/delivs/transfer/09212/09212T181734
scp wsd cin:/local/wsd cin/inbox/hrp/2009_212_18_17_34/*
/wise/fops/ingest/delivs/transfer/09212/09212T181734
scp wsd cin:/local/wsd cin/inbox/operations/hrp/2009_212_18_17_34
/wise/fops/operations/hrp
mv transfer/09212/09212T181734 /wise/fops/ingest/delivs/09212
transfer successful for 09212T181734 ...
Jul 31 11:35:13: sleeping 600 ...
```

### 3.4 get\_wsd cin Data Locations

Here is the data on wsd cin. Note the YYYY\_JJJ\_HH\_MM\_SS directory name.

```
-bash-3.2$ ls -al /local/wsd cin/inbox/hrp/2009_212_18_17_34/
-rwxr-xr-- 1 wsd cin wise 68481504 Jul 31 11:29
WIS_HRP_PKT_FE1A_2009_212_18_17_34_001.bin
-rwxr-xr-- 1 wsd cin wise 67516176 Jul 31 11:29
WIS_HRP_PKT_FE1B_2009_212_18_17_34_001.bin
-rwxr-xr-- 1 wsd cin wise 63101220 Jul 31 11:30
WIS_HRP_PKT_FE1C_2009_212_18_17_34_001.bin
-rwxr-xr-- 1 wsd cin wise 15643992 Jul 31 11:24
WIS_HRP_PKT_FE1D_2009_212_18_17_34_001.bin
-rw-r--r-- 1 wsd cin wise 214 Jul 31 11:20 WIS_HRP_SUM_2009_212_18_17_34.txt
```

### 3.5 get\_wsd cin Manifest Files

Here is the manifest file and it's contents for this delivery.

```
-bash-3.2$ ls -al /local/wsd cin/inbox/operations/hrp/2009_212_18_17_34
-rw-r--r-- 1 beck wise 283 Jul 31 11:34
/local/wsd cin/inbox/operations/hrp/2009_212_18_17_34

-bash-3.2$ cat /local/wsd cin/inbox/operations/hrp/2009_212_18_17_34
WIS_HRP_PKT_FE1A_2009_212_18_17_34_001.bin 68481504 3591429130
WIS_HRP_PKT_FE1B_2009_212_18_17_34_001.bin 67516176 3573394291
WIS_HRP_PKT_FE1C_2009_212_18_17_34_001.bin 63101220 49348116
WIS_HRP_PKT_FE1D_2009_212_18_17_34_001.bin 15643992 2966573232
WIS_HRP_SUM_2009_212_18_17_34.txt 214 2887854670
```

### 3.6 get\_wsdccin Log File example

Here is the log file from get\_wsdccin where this delivery was transferred. One can find this output in the /wise/fops/operations/raw\_del/transfer\_summary file.

```
Jul 31 11:35:05: found 09212T181734 to transfer ...
mkdir -p /wise/fops/ingest/delivs/transfer/09212/09212T181734
scp wsdccin:/local/wsdccin/inbox/hrp/2009_212_18_17_34/*
/wise/fops/ingest/delivs/transfer/09212/09212T181734
scp wsdccin:/local/wsdccin/inbox/operations/hrp/2009_212_18_17_34
/wise/fops/operations/hrp
mv transfer/09212/09212T181734 /wise/fops/ingest/delivs/09212
transfer successful for 09212T181734 ...
```

### 3.7 Output Files Locations

Here is the output location on wcnode35 and the directory contents.

```
beck@caustic;rhe4(ops):~[0]% ls -al /wise/fops/ingest/delivs/09212/09212T181734
-rwxr-xr-- 1 beck wise 68481504 Jul 31 11:35 WIS_HRP_PKT_FE1A_2009_212_18_17_34_001.bin
-rwxr-xr-- 1 beck wise 67516176 Jul 31 11:35 WIS_HRP_PKT_FE1B_2009_212_18_17_34_001.bin
-rwxr-xr-- 1 beck wise 63101220 Jul 31 11:35 WIS_HRP_PKT_FE1C_2009_212_18_17_34_001.bin
-rwxr-xr-- 1 beck wise 15643992 Jul 31 11:35 WIS_HRP_PKT_FE1D_2009_212_18_17_34_001.bin
-rw-r--r-- 1 beck wise 214 Jul 31 11:35 WIS_HRP_SUM_2009_212_18_17_34.txt
```

## 4 Ingestpipe Procedures

### 4.1 Ingestpipe Command

The ingestpipe command basically takes all the MOS data and copies it to the correct location, loads the housekeeping data into the hk database, decommutes the telemetry packet files into their scan delimited frames and starts the quicklook processing.

Here is a "vanilla" ingestpipe command line. This command will ingest the MOS delivery 09202M001533.

```
ingestpipe -delivid 09202M001533 -run @mos
```

Here is an example of a telemetry ingest. The '-v' turns on the verbose output for delivery telemetry 09154T205309. Note the '@tlm' for telemetry. The '-@ql' means run the telemetry code without starting the quicklook pipeline processing. the '-replace' means this delivery has been done previously and I want to replace the frames in the /wise/fops/10 and /wise/fops/scans directories with this run. The 'orbitoff=200' means to add 200 to the beginning scan number. This is used prior to launch for testing with limited amounts of test data.

```
ingestpipe -v -delivid 09154T205309 -run @tlm,-@ql -replace -opts orbitoff=200
```

There are any number of parameters input to ingestpipe that can be displayed with the "ingestpipe -help2" command. Some of the parameters that we currently use frequently are displayed below.

- data\_root - this overrides the default data\_root of /wise/fops. typically we will use /wise/tops for testing purposes.
- opts mosauto=1 - when ingesting science telemetry, this will check to see that we have all the necessary MOS files that cover the time range.
- opts ck\_scid=-163000 - this overrides the pointing data's spacecraft id to the correct number that ingest expects.

```
-:wqlspipe:wsspipe:wqlfpipe:wsfpipe '-opts ignore_qa_rc=1' - this actually  
passes override parameters to the quicklook pipelines. This override tells  
the pipelines to ignore frame failures when running the QA module.
```

#### 4.2 run\_ ingest and run\_ ingest.auto Commands

There is a command called run\_ ingest. This is used to ingest the mos or telemetry data separately. One should ingest the mos data prior to ingesting telemetry data. This should be run as wiseops on wcnode35 using the newcfg ops configuration unless requested otherwise. This would be used when we need better control over what is being ingested. For example if a new pef file is coming in that needs to be verified prior to ingesting. Generally the OPS team will be notified by other WISE personnel if file verification is needed on specific incoming files. Otherwise the run\_ ingest.auto mentioned further down is generally running in the background.

```
command usage: run_ ingest TYPE template  
where TYPE is mos or tlm  
template is template filename
```

Example(s) :

```
wiseops@wcnode35;rhe4(ops):~[0]%/home/beck/bin/run_ ingest mos  
/wise/fops/operations/templates/mos.ingest
```

or

```
wiseops@wcnode35;rhe4(ops):~[0]%/home/beck/bin/run_ ingest tlm  
/wise/fops/operations/templates/tlm.ingest.cover_off
```

The run\_ ingest.auto is a process that we try to keep running in the background on wcnode35. It should be started up as wiseops on wcnode35 using the newcfg ops configuration.

This will ingest the incoming mos and telemetry data as it arrives. It will check to see if there are any delivery id's in the /wise/fops/operations/ingest file. If there are it will first ingest the mos data and then the telemetry data. As it ingest the data it will write to the /wise/fops/operations/logs/ingest.log file.

```
command usage: run_ ingest.auto MOSTEMPLATE TLMTEMPLATE
```

```
where MOSTEMPLATE is mos template filename  
TLMTEMPLATE is tlm template filename
```

To verify the process is running:

```
wiseops@wcnodes35;rhe4(ops):bin[0] % ps -ef | grep ingest
wiseops 20183      1 0 Jan12 ?          00:00:00 /usr/bin/perl
/home/beck/bin/run_ ingest.auto
/wise/fops/operations/templates/mos.ingest
/wise/fops/operations/templates/tlm.ingest.cover_off
wiseops 20185 20183 0 Jan12 ?          00:00:00 tee -a
/wise/fops/operations/logs/ingest.log
wiseops 26707 26635 0 08:19 pts/4    00:00:00 grep ingest
```

Examples of the templates used in the above command:

```
wiseops@wcnodes35;rhe4(ops):~[0] % cat /wise/fops/operations/templates/mos.ingest
ingestpipe -v -run @mos -delivid XXXXXX
```

```
wiseops@wcnodes35;rhe4(ops):~[0] % cat /wise/fops/operations/templates/tlm.ingest.cover_off
ingestpipe -v -run @tlm -opts mosauto=1 -delivid XXXXXX -replace
```

#### 4.3 Input Data Location

The input to ingestpipe are in the /wise/fops/ingest/delivs directory. To run ingestpipe, the output directory is created in /wise/fops/ingest. For example, in the above 09154T205309 delivery mentioned in section 4.1, input data will be found in /wise/fops/ingest/delivs/09154/09154T205309. The files are the four bands of packet telemetry.

```
beck@caustic;rhe4(ops):delivs[1] % ls -al /wise/fops/ingest/delivs/09154/09154T205309
-rw-rw-r-- 1 beck wise 1241800560 Jun  4 15:29 WIS_HRP_PKT_FE1A_2009_06_03_20_53_09.bin
-rw-rw-r-- 1 beck wise 1403922156 Jun  4 15:29 WIS_HRP_PKT_FE1B_2009_06_03_20_53_09.bin
-rw-rw-r-- 1 beck wise 2107553448 Jun  4 15:30 WIS_HRP_PKT_FE1C_2009_06_03_20_53_09.bin
-rw-rw-r-- 1 beck wise 509920320 Jun   4 15:30 WIS_HRP_PKT_FE1D_2009_06_03_20_53_09.bin
```

#### 4.4 Output Data Location

The output directory has been created in /wise/fops/ingest/09154/09154T205309 and the ingestpipe command has been run from this directory. The \*frames.tbl contain the frame numbers and associated information for each scan. The scan numbers are the 004??a identifiers at the beginning of the \*frames.tbl. The 09154T205309-scans.tbl contains a summary of the scans for the delivery also. Any errors from the ingestpipe will end up in the stderr\*.txt files, one per band.

```
beck@caustic;rhe4(ops):delivs[0] % ls -al /wise/fops/ingest/09154/09154T205309
-rw-rw-r-- 1 beck wise 360364 Jul 31 10:12 00485a_09154T205309-frames.tbl

-rw-rw-r-- 1 beck wise 0 Jul 31 10:03 stderr-w4.txt

```

The ingestpipe will create or in the case of '-replace' rewrite the frame directories in both the /wise/fops/10 and scans directories. The /wise/fops/10 directory is the actual location for the raw frame data.

#### 4.5 L0 Data Location

Here is the actual 10 directory for the 09154T205309 scan 00485a.

```

beck@caustic;rhe4(ops):~[0]% ls -al /wise/fops/10/5a/00485a/

```

#### 4.7 Quicklook Processing

The ingestpipe will also setup and run quicklook processing on the telemetry deliveries as a default. The quicklook processing will algorithmically select about 100 frames per delivery to run through an abbreviated scan pipeline. Output for this example is in /wise/fops/ql/4m/09194m. The directory naming convention is the YYJJJ increased alphabetically from letter a for each YYJJJ delivery for that julian day. This delivery was the mth quicklook run for this day.

```
beck@caustic;rhe4(ops):09194m[0]% ls -al /wise/fops/ql/4m/09194m
-rw-rw-r--    1 beck wise  2110 Jul 13 10:56 09194m-frames.tbl

```

#### 4.8 Quicklook Summary

Quicklook processing is done to get a quick look of the delivery before the formal scan pipeline processing runs. The QA people are to be alerted when a quicklook has completed by emailing quicklook location and a summary of the processing. The quicklook summary can be generated following quicklook completion with the following command. Parm LOGDIR is the quicklook directory such as /wise/fops/ql/4m/09194m in the previous example.

```
beck@caustic;rhe4(ops):~[0]% /home/beck/bin/qlook_summary  
command qlook_summary: LOGDIR
```

Here is an example of the output from qlook\_summary. In this example, frame 1 pipeline blew with a 64 return code. The error messages directly following the 001 frame number were copied from the offending frame directory's error log. In this case the pattern match failed because there was only one band for that frame.

```
beck@caustic;rhe4(ops):~[0]% m /wise/fops/operations/problems/09195j.MM-DOY-

#### 4.9 Short Quicklook Summary

Sometimes you just want to see a summary without all the error messages. The qlook\_summary.short does just that. See example below.

command usage: qlook\_summary.short LOGDIR

To obtain the quicklook directory from a telemetry delivery id cd or ls the directory in question. In the example below we went to the directory in which we were trying to obtain the QL directory location.

```
wiseops@wcnode35;rhe4(ops):10019T041251[0]% pwd
/wise-ops/11/wise/fops/ingest/10019/10019T041251

wiseops@wcnode35;rhe4(ops):10019T041251[0]% grep "QL dir" IngestPipe.log
... setting up 42 frame dirs in QL dir '/wise/fops/ql/9e/10019e' ...

wiseops@wcnode35;rhe4(ops):10019T041251[0]% cd /wise/fops/ql/9e/10019e
wiseops@wcnode35;rhe4(ops):10019e[0]% qlook_summary.short .
```
