

3-band cryo saturation trending

F. Masci

WISE Science Team Meeting, 06/20/2011

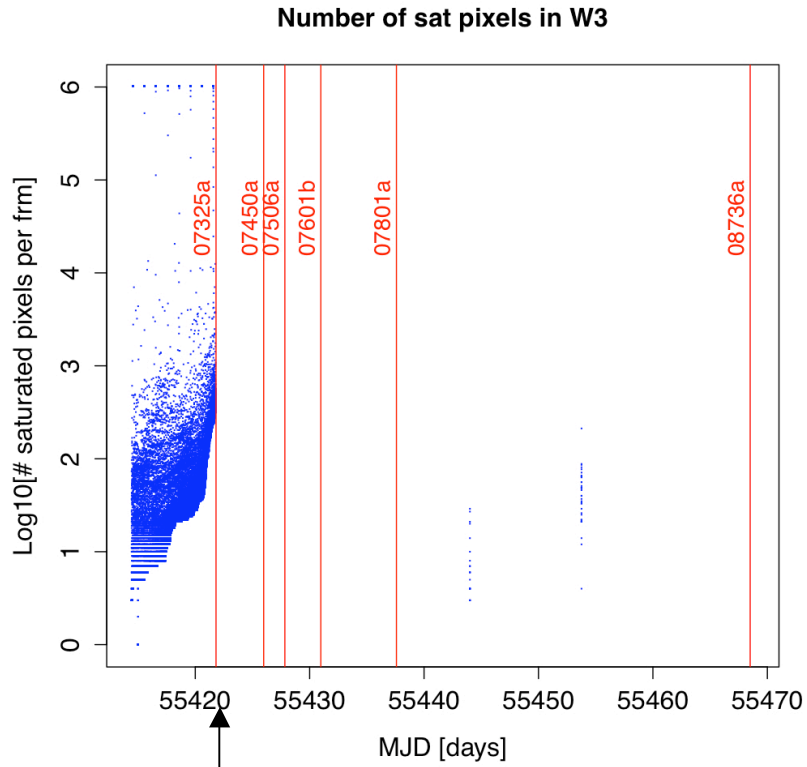

Number saturated pixels from L0-frame encoding for 3-band cryo-period (~1643 scans covering ~1/3 of sky)

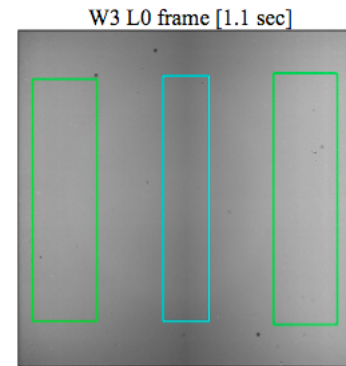

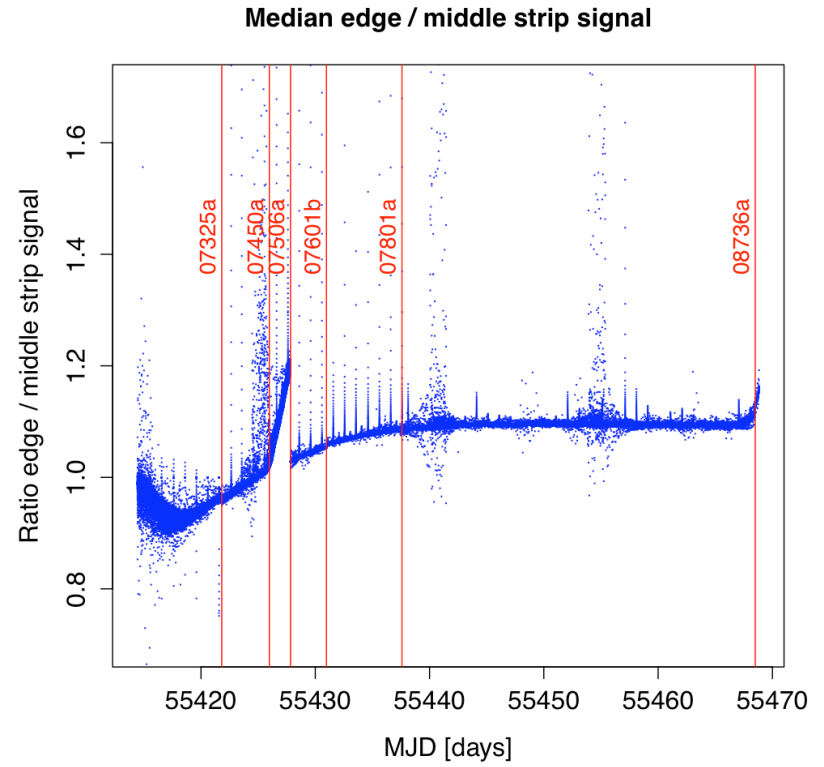

FEB offset reset

FPA temperatures > 32K

W3 Trends

exposure time < nominal,
=> sat-encoding not possible

Diff = median of:
 $0.5 * (\text{left} + \text{right edges}) - \text{middle}$
